PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 5+ years designing and scaling **high-availability production systems handling 2M+ daily messages**. Deep expertise in **system design, REST API architecture, distributed systems, and frontend performance** — with a track record of resolving critical infrastructure failures, shaping product vision, and owning features end-to-end from design through release. Leverages AI tooling to accelerate engineering workflows and holds **Microsoft AI Product Manager Professional Certificate** and **Google Cloud Digital Leader** certification.

SKILLS

Languages: Java, JavaScript, TypeScript

Frontend: Vue, Nuxt, React, Redux, Pinia, Web Components, Vite, Webpack, Microfrontend Architecture

Backend: NestJS, Node.js, ExpressJS, Spring Boot, REST APIs, Microservices, Distributed Systems, Event-Driven Architecture, Scalability

Databases & Cache: MongoDB, Elasticsearch, Google Cloud Datastore, Redis

Cloud & DevOps: Docker, Kubernetes, GCP, CI/CD, GitHub Actions, Jenkins, High Availability

Observability & Testing: Grafana, Uptrace, Mongo Atlas, Jest, Playwright, JUnit

AI Engineering: LLM Integration, Prompt Engineering, AI Agents, AI-assisted Code Review

Engineering Practices: System Design, API Design, Technical Spec Writing, Code Review, Agile, Sprint Planning

CERTIFICATIONS

- **Microsoft AI Product Manager Professional Certificate** — Microsoft / Coursera, Jun 2026
- **Google Cloud Digital Leader Training Professional Certificate** — Google Cloud / Coursera, Feb 2025
- **Flutter & Dart – Complete App Development Specialization** — Packt / Coursera, Aug 2025

EXPERIENCE

Software Development Engineer II | **HighLevel Inc.** Jul 2024 – Present · India, Remote

- Architected a platform-wide **Notifications Service** (Frontend + Backend), defining event-driven architecture, REST APIs, and shared standards adopted across **4+ applications**; scaled to **2M+ messages/day** with **99.9% uptime**.
- Built a user activation workflow sending **200K+ personalized emails/week**, improving customer onboarding and engagement.
- Designed a self-service email template engine powering **2K+ customizable templates/week**, enabling branded communications without engineering effort.
- Led architecture and delivery of the **Community Platform** and **Client Portal** (Web & Mobile), coordinating with **3+ backend teams** to deliver **15+ features** with near zero critical production issues.
- Led **Vue** → **Nuxt** migration using a layer-based monorepo, creating a shared architecture now powering **5+ production applications**.
- Built an AI-powered migration agent that reduced Web Component → Nuxt migration effort by **~60%**, accelerating web and mobile delivery.
- Resolved Kubernetes, Redis, and infrastructure bottlenecks, reducing production server restarts by **91% (71→6/week)** and lowering infrastructure costs.
- Eliminated critical production issues including memory leaks, database latency, email tracking, and CRM sync failures, significantly improving platform reliability.
- Built an **Event Loop Guard** with distributed tracing and Grafana dashboards, enabling proactive detection of latency and performance bottlenecks.
- Improved frontend performance by increasing **Lighthouse score from 26→72 (+177%)** and reducing bundle size by **68% (2MB→650KB)**.
- Implemented Auto-define Permissions, resolved **200M+ weekly 404 errors**, and introduced platform-wide state synchronization to improve consistency.
- Mentored engineers on architecture, observability, and AI-assisted development, improving engineering velocity and code quality.

Technologies: NestJS, Node.js, Vue, Nuxt, React, TypeScript, MongoDB, Redis, GCP, Kubernetes, Docker, Grafana, Uptrace, GitHub Actions

Software Engineer | **Full Creative** Mar 2021 – Jul 2024 · India, Remote

- Increased LMS **user engagement by 60%** by architecting a **YouTube API integration** — identified the opportunity through user behaviour analysis, designed the full REST API data flow, and owned delivery end-to-end including QA and rollout, transforming passive video consumption into an **interactive learning experience** that directly improved platform retention.
- Led a platform-wide **Web Components** → **React (Functional + TypeScript)** migration — resolved critical rendering bottlenecks that were degrading user experience, and established **reusable component standards and API design patterns** adopted across **3+ product lines**, creating a scalable frontend foundation that reduced future feature development time.
- Designed and implemented a **Microfrontend architecture** enabling shared component libraries across multiple product lines — eliminated cross-team code duplication, improved **scalability of the frontend delivery pipeline**, and enabled independent deployment of product modules, compressing release cycles across the engineering organisation.
- Optimised **ElasticSearch queries** and **Google Cloud Datastore** access patterns through systematic query analysis — cut bulk report generation time by **64% (70s → 25s)**, removing a key performance bottleneck for **thousands of daily users** and improving the reliability of data-heavy workflows critical to client reporting.

Technologies: NestJS, Node.js, React, TypeScript, Vue, Elasticsearch, Google Cloud Datastore, MongoDB

Full Stack Developer | **Aiyolabs** May 2020 – Aug 2020 · Bengaluru, India

- Built **REST API-backed analytics dashboards and reporting modules** for SMB clients — designed data models, implemented backend services, and delivered visualizations that translated raw business data into **actionable insights**, improving client decision-making speed and laying the groundwork for data-driven operations.

Technologies: Node.js, MongoDB, React

EDUCATION

Bachelor of Information Technology — National Engineering College, Kovilpatti, Tamil Nadu · 87.2% · 2017–2021
